ASOLO

Hochwertige Outdoor Schuhe aus Italien. Die perfekte Abstimmung zwischen Tradition, Innovation und Qualität eines Familienbetriebes. Qualität und Liebe zum Detail unterscheidet ASOLO von anderen Schuhmachern. Die Schuhmachertradition steht im ASOLO DNA. Seit vier Generationen befasst sich die Familie Zanatta mit der Entwicklung und Herstellung von hochwertigen Outdoorschuhen. Eine langjährige Tradition mit konstanter Weiterentwicklung und hervorragender Qualität. Die revolutionäre Idee des Gründers war die Kreation eines Bergschuhs, aus Kombination von Leder und Textilmaterial (Cordura). Die nächste Entwicklung liess nicht lange auf sich warten und ein Modell mit einer GORE-TEX® Membrane wurde später auch auf den Markt gebracht - Innovationen die nicht nur den Markt, sondern auch die Machart von Outdoorschuhen veränderte.

La qualité et le souci du détail distinguent ASOLO des autres fabricants de chaussures. La tradition de la chaussure fait partie de l'ADN d'ASOLO. Depuis quatre générations, la famille Zanatta développe et fabrique des chaussures Outdoor de haute qualité. ASOLO a bâti sa réputation sur une longue tradition, un développement constant et une qualité exceptionnelle. L'idée révolutionnaire du fondateur était la création d'une botte de montagne fabriquée à partir d'une combinaison de cuir et de textile (Cordura). Le développement suivant ne s'est pas fait attendre et un modèle avec une membrane GORE-TEX® a ensuite été mis sur le marché - des innovations qui ont non seulement changé le marché, mais aussi la conception des chaussures Outdoor.

90% recycled 18/8 stainless steel

Recycled stainless steel is an important step towards eco-designs. Choosing recycled stainless steel allows to considerably reduce the environmental impact of the raw material's manufacturing process.

By avoiding the impact of the extraction, mineral transport, and the energy consumption required to produce virgin material, carbon emissions from stainless steel manufacturing are reduced by 58% (based on SIRSA Qwetch's 2020 Carbon Footprint).

The stainless steel used for Qwetch products is manufactured according to the Recycled Claim Standard 2.0 and contains 90% of recycled material.

Small and practical heat stick that helps you relieve the itching of insect bites. Rechargeable via your smartphone and transportable on your keychain. With different settings and an effectiveness within seconds.

The heat_it from Heat it is a small, practical heat stick that offers you relief against itching and pain within seconds for insect bites. The local heating can stop the histamine release after a sting and thus prevent itching and pain. Due to the short heat pain, the stimulus transmission is reduced and the itch signal cannot be transmitted properly after a sting. You can recharge the pen with your cell phone and use it up to a thousand times per cell phone landing. The heat_it fits on any keychain so you always have it with you. Ideal for a summer or a trip to tropical climes without itching and scratching!

Le label BlueSign APPROVED garantit que les entreprises partenaires sont engagées dans un programme complet d'amélioration continue et que leurs fournisseurs respectent également un cahier des charges précis. En plus de certifier la conformité légale du tissu, le label BlueSign est un gage de qualité environnementale et sociale. Il s'intéresse à toutes les étapes de la fabrication, depuis l'extraction des matières premières jusqu'au tissu fini que nous achetons, et met en lien les différents acteurs le long de la chaîne d'approvisionnement. Il s'agit d'un des systèmes de labellisation les plus stricts et complets à l'heure actuelle. En savoir plus : <https://www.bluesign.com/en>

The BlueSign APPROVED label guarantees that the partner companies are committed to a comprehensive programme of continuous improvement and that their suppliers also comply with precise specifications. In addition to certifying the legal compliance of the fabric, the BlueSign label is a guarantee of environmental and social quality. It looks at all stages of manufacturing, from the extraction of raw materials to the finished fabric we buy, and links the different actors along the supply chain. It is one of the most stringent and comprehensive labelling schemes available today. Find out more: <https://www.bluesign.com/en>

D+ GRIP : Nos semelles et plus particulièrement nos crampons ont été développées en s'inspirant de notre environnement. La forme de nos crampons sont une représentation des rapaces que l'on retrouve dans nos montagnes. Synonyme de vitesse, précisions et accroche. Chaque type de semelle a été pensé pour offrir le meilleur compromis entre accroche et poids.

Our soles, and more specifically our crampons, were developed with our environment in mind. The shape of our crampons is a representation of the birds of prey found in our mountains. Synonymous with speed, precision and grip. Each type of sole has been designed to offer the best compromise between grip and weight.

En décembre 2014, Raidlight lance Outdoor INO-FAB, un atelier de production textile nouvelles technologies «made in France» sous forme d'une entreprise indépendante. L'utilisation de technologies innovantes comme la découpe laser et le thermocollage permet de changer radicalement la conception des produits techniques.

In December 2014, RaidLight launched Outdoor INO-FAB, a production workshop of new textile technologies. "Made in France" was formed as an independent company. The use of innovative technologies such as laser cutting, thermobonding or even ultrasonic welding, allows us to drastically change the design and construction of our technical products.

LazerTech est un procédé de découpe textile par laser. Cette technologie permet une découpe propre sans nécessité d'une couture supplémentaire pour un produit simplifié, allégé et donc plus performant.

Les PFC sont des composés chimiques faisant partie intégrante d'un traitement Durable Water Repellency – DWR permettant de confectionner des matières déperlantes. Ces substances sont déposées en surface sur un tissu pour permettre à l'eau de s'écouler sous forme de goutte sans l'imbiber. Ces composés sont historiquement constitués de substances cancérogènes, perturbateurs endocriniens et toxiques pour l'environnement. Chez Raidlight, pour nos multicouches, nous avons changé la composition des traitements de déperlance pour passer sur des technologies sans PFC tout aussi résistantes à l'eau mais ne contenant aucun élément nuisible pour l'environnement et l'utilisateur.

PFCs (fluorocarbons) are chemical compounds that have historically been an integral part of DWR (Durable Water Repellency) treatments for water-repellent and waterproof fabrics. These treatments coat the surface of a fabric to allow water to bead in drops and roll off the fabric without being absorbed. DWR treatments are historically made up of PFCs that are carcinogenic and toxic to the environment. At Raidlight, for all our DWR treatments, we have changed to PFC free technologies that still allow the water to bead but contain no elements that are harmful to the environment and the user.

Nos tee-shirts DRY LIGHT sont composés d'un maillage 100% polyester plus resserré sur les manches. Cette matière certifiée UPF 50+ est conçue pour protéger la peau en bloquant plus de 98% des rayons UV (ultra-violets) qui atteignent la fibre en surface.

Our Dry Light fabric is 100% ultrafine tight weave polyester. This UPF 50+ certified fabric protects the skin by blocking 98% of the sun's rays (UVA and UVB).

RaidLight développe ses équipements en privilégiant une démarche de développement durable. Vous trouverez dans nos gammes du polyester recyclé qui présente l'avantage d'être écologique. En effet, cette matière offre tout le confort et la qualité d'un produit en polyester classique, à la grande différence que sa matière première est issue du recyclage (résidus industriels de polyester, bouteilles plastiques triées,...). En procédant ainsi, nous limitons nettement la consommation des ressources de la planète, tout en gardant les avantages du polyester classique (légèreté, séchage rapide et entretien facile).

RaidLight develops its products with an approach towards sustainable development. You will find in our ranges recycled polyester, which has the advantage of being environmentally friendly and economical. These fabrics offer all the comfort and quality of a virgin polyester, the big difference is that its raw material comes from recycling (polyester industrial waste, bottles, sorted plastics, etc.). By doing this we significantly limit the consumption of the planet's resources, whilst maintaining the advantages of virgin polyester (lightweight, quick drying and easy maintenance).
